Windows7 Darkclear Is One Of The Best Glass Themes for Windows 7.Q: App crashes after changing tabbar image I have a UITabBarController with 4 items, each with a corresponding viewController. For one of the items, I want to change the tabbar image. The tab bar is from the built-in Navigation template. In my didSelectViewController method, I've the following code: if ([self.selectedItem isKindOfClass:[LoginViewController class]]) { self.tabBarController.tabBar.image = [UIImage imageNamed:@"login.png"]; self.tabBarController.selectedItem = nil; } I'm using iOS 5. I'm wondering if this is the correct way of changing the image and the selectedItem, or should I be changing the image directly in my LoginViewController viewDidLoad? The app crashes on the tab bar call, as soon as I've made the image change. So I believe there is something wrong with the way I've instantiated the tab bar controller. What am I doing wrong here? A: Since this is a UITabBar, you should not have a UITabBarController. Just create the 4 view controllers that make up the tab. Then, in didSelectViewController, instantiate your new view controller and assign it to the tab. Finally, your image code should be fine. Q: Does HTML5 fully implement WHAT 2d92ce491b
