No. 3,918,382 of the same inventor, which was issued to the same assignee hereof on Nov. 11, 1975, describes the general concept and principle of operation of a hand-held tool for applying a surface treatment, such as paint or a clear lacquer, to a rough-surfaced, or in particular those of aluminized metal materials, etc. Said patent describes hand-held tools comprising a hand-gripper, called hereinafter a tool body, capable of being mechanically locked in place on a tool support, called a support head, and a drive unit connected to the body via a chuck at the end of a articulated arm which, connected to the body via a joint, is capable of being angularly driven by a motor-driven actuator for applying the appropriate torque for imparting relative rotational movement between the tool body and the support head, for imparting and maintaining an accurate pre-set attitude, and for applying the necessary drive torque to the tool body for actually driving the tool body with respect to the support head. Said tool comprises a die holder fast with the tool body for holding one or more dies to be applied to the surface to be treated, in particular aluminized surface, the ba244e880a
