In this post I'd like to talk about the "Ingredients" of a high quality espresso roast. Quality ingredient One of the key ingredients for a high quality espresso roast is the selection of raw beans. The raw bean characteristics that lend themselves to producing high quality espresso roasts are not necessarily always the same traits that are sought in making a delicious cup of coffee. Flavor Raw bean selection is an art, not a science. Good extraction techniques and impeccable timing are needed for good quality espresso. Too much skill and too many variables can result in a crappy cup of espresso. However, my goal for this post is not to be pedantic and technical – my goal is to help you understand what makes espresso so amazing. So if I say that a coffee is "shallow roasted", what does that mean? As you get deeper in to your roasting career, it will become more clear how you can manipulate the flavor of a raw bean (or set of beans). There are two major flavors that are present in a coffee bean – that is, the "flavor" that is extracted from the bean. These are aroma and flavor. The aroma is due to various chemical changes that occur in the bean. The flavor is due to what is eventually distilled from the bean. An interesting observation is that flavor is what many people think of when they think of "coffee taste". Aroma is what often gets lost in the production of a coffee (even among the coffee professionals). And now to the magic! There are
