I've tried to add an ID to each checkbox, and set the checked attribute to "true" as well as the length to "true" but I couldn't get it to work. A: Your selector is saying, for example: $("input[type=checkbox]") to find an element that has type checkbox in the HTML tag. Your HTML looks like this: Is there a reason you have multiple of these? Because you can just use your existing selector and return the length of any elements that have type="checkbox" to true: $("input[type=checkbox]:checked").length And as a side note, if your HTML looks like this: Your selector will find that element and since there's no :checked selector you'll get a false, which doesn't seem like what you want. A:
