
Bunifu UI WinForms 1.7.0.0

bunifu ui winforms 1.7.0.0 for mac os x I am trying to use bunifu ui to develop an application using winforms. After making some progress and reaching certain features, my code started to break a lot. Here are some parts of my code that are causing problems: // Create a new Form that uses the bunifu interface. Form1 = new Form1(); // Create a Listbox that is used for data. ListBox1 = new ListBox(); // Loop through the items in the Listbox and store it in a string array. ListBox1.Items.Clear(); //
