No. The only scale is for the drawing of the project. Post-treatment of non-smoker's lung induced by smoke inhalation. Smoke inhalation has been reported to induce interstitial pneumonitis (non-smoker's lung), but the time course and mode of development of this lung have not been fully documented. The aim of this study was to determine the time course of non-smoker's lung induced by smoke inhalation. In total, 49 Japanese white rabbits were anesthetized, and then an aerosol of cigarette smoke was introduced into the trachea to create lung injury. The rabbits were divided into five groups, according to the time of first measurement. The animals were sacrificed on the 2nd, 3rd, 7th, and 21st day after the smoke inhalation, and then autopsied. Lung samples were stained with haematoxylin-eosin. On the 2nd day, focal subpleural and peribronchiolar lymphocytic infiltration was found in each group. Lymphocytes and monocytes were seen in the alveolar spaces and the interstitium of alveoli on the 3rd day. In addition, mononuclear cell infiltration was observed in the alveolar spaces and the interstitium of the alveoli on the 7th and 21st day. There were no significant differences in the mean lung injury score among the groups. Post-treatment of non-smoker's lung induced by smoke inhalation seems to be less severe than that reported previously. The clinical significance of this lung remains unclear. Thursday, October 14, 2009 Still laughing at this ridiculous post from Ireland's Minister for Justice, Equality and Law Reform, Noel Dempsey. As with the Crime and Punishment brief he's been posting, it's full of bluster. Here's a summary of what's wrong with it from The Irish Times: Noel Dempsey, Minister for Justice, Equality and Law Reform, in response to a motion of confidence tabled by Sinn Fein in the Dáil, Thursday 12 October: It was appropriate to mention the plight of the prisoners' children, the wives and the partners of people who are in the main part of their married
