Autodesk today announced Autodesk AutoCAD 2020, an update to the leading desktop CAD application for architects and engineers. The new software includes more powerful visualization capabilities, improved rendering performance, and new features for creating orthographic drawings, document models, and Web publications, Autodesk said in a statement. Users can design and document projects in any industry and on any scale using the new CAD tool. For example, AutoCAD can be used to create architectural drawings and drafting schematics. Designers can use the free Autodesk BIM 360 cloud service to collaborate and share their designs, and on-premise software with AutoCAD, Autodesk added. Visualizations are the core of any CAD application. AutoCAD has always offered the choice of wireframe, surface and solid modeling views as well as rendering views. For example, the view can be represented by a wireframe, surface or solid model. AutoCAD 2020 adds support for native 3D meshes, volumetric modeling, and wireframe texturing. It seems to be a growing problem, fueled by the growing income disparity in this country. I think we’re going to have to take a hard look at this, because unless we change things for the better, this will only get worse. I have a few ideas, one of which is to charge a “super rich” an income tax on their income over \$500k. They can then pay for their own government services. They don’t pay for services like schools, roads, and bridges for their own kids, but they could pay for their own education and school services, for example. It also seems to me that it’s time to restore Social Security to what it was before Reagan. We’ve gone so far as to reduce the social safety net for the poor, with cuts to food stamps and Medicare/Medicaid, and raising the cost of college. I’m not for the elimination of the military, but we need to go back to the old “full-employment” military policy. It’s time to restore Social Security, Medicare, Medicaid, food stamps, and the rest of the social safety net. If we’re not willing to give those who don’t work and don’t contribute to Social Security an income, then we shouldn’t receive government services either. We also need to have taxes on all capital gains and dividends, which are now taxed at a lower rate than regular income. If you’re a millionaire who has billions in income, it shouldn’t be taxed at a lower rate than what you pay in taxes on your wages. I’m not anti-business, but I am pro-free market and pro-redistribution of income. I also believe we have a right to a full-employment economy. This isn’t to say we won’t need taxes to help fund the services we need, but we don’ 5b5f913d15

Khorasan Khorasan is a historical term for an area in western Iran and eastern Afghanistan that once included much of the territory occupied by the modern-day states of Iran and Afghanistan. The word "Khorasan" originally referred to the entire area from Balkh and Samarkand in the east to Qum and Hamadan in the west. From an Afghan perspective, the term Khorasan also refers to western Afghanistan. Origin of the term Khorasan appears in Islamic writings as a synonym for Sasanian territory. The Khuraysh Rashidun tribe in Afghanistan identifies themselves as Khorasani (literally "children of Khorasan", an area of Iran). In the writings of the Sasanian empire, Khorasan encompassed the domains of the Sasanian Empire in Central and Eastern Asia, including Afghanistan and modern-day eastern Iran. Following the Islamic conquest of Persia, the area of Khorasan became known as Khorasan, a term used by the Arab Muslim conquerors to distinguish this region from the Sasanian Empire, which continued to exist and existed for a period after the Arabs took control of Iran. During the reign of the Umayyad Caliphate, Khorasan was referred to as al-Mashriq, meaning the "Western Regions". The modern states of Afghanistan and Iran arose from regions formerly called Khorasan. Khorasan consists of the great majority of the lands of modern Iran, though it does not include the provinces of Khorramshahr, Ilam and Lorestan.
